

Как добавить блэклисты из открытых источников в address list-ы Микротика ?

Оригинальная инструкция лежит [здесь](#), она датируется 2018 годом.

Данный метод основан на простом блокировании заведомо вредоносных подсетей, которые были замечены в подозрительной активности – сканирование, брутфорс, неудачные попытки доступа к различным сервисам, только всё это делается не вручную, а в автоматическом, или полуавтоматическом режиме.

Существует много открытых ресурсов, которые собирают информацию о недобросовестных подсетях и генерируют актуальные списки, которые мы можем просто загружать на наш роутер.

К таким ресурсам относятся:

Blocklist.de – бесплатный открытый ресурс, чьи сервера часто подвергаются различного рода атакам, таким как атаки на ssh, почтовых и файловых сервисов, веб-серверов и т.д. IP адреса атакующих заносятся в список и выкладываются в общий доступ;

dshield.org – генерирует списки из топ-20 подсетей, из которых за последние трое суток совершалось наибольшее количество атак;

Spamhaus – генерирует списки IP адресов, замеченных в «спаммерской» активности, а также «угнанных» устройств, с помощью которых также осуществляется вредоносная деятельность;

Итак, чтобы заблокировать адреса из этих списков, нужно сначала создать блокирующее правило на нашем роутере.

1) Заходим в интернет по следующим адресам и парсим списки.

<https://lists.blocklist.de/lists/all.txt>

<https://www.spamhaus.org/drop/drop.txt>

<https://feeds.dshield.org/block.txt>

2) В моём случае они уже спарсены (16.10.2025).

Это для **sbl dshield**:

3) Теперь заходим на Микрот, открываем терминал (New Terminal) и вбиваем туда эти списки.

Они уже подготовлены в виде команд.

- 4) Теперь нужно настроить правила в IP – Firewall – Filter rules, которые будут блокировать трафик из данных подсетей.
Для этого создаём 6 правил:

#1.

Chain: **input**

Src. Address List: sbl shield

Action – drop

#2.

Chain: **input**

Src. Address List: sbl spamhaus

Action – drop

#3.

Chain: **input**

Src. Address List: sbl blocklist.de

#4.

Chain: **forward**

Src. Address List: sbl shield

Action – drop

#5.

Chain: **forward**

Src. Address List: sbl spamhaus

Action – drop

#6.

Chain: **forward**

Src. Address List: sbl blocklist.de

Action – drop

Должно получиться как-то так.

Правила на input с комментариями, правила на forward – без, но, я думаю, и так всё понятно.

::: dshield.org - генерирует списки из топ-20 подсетей, из которых за последние трое суток совершалось наибольшее число атак.												
33	✖ drop	input		sbl dshield							0 B	0
::: Spamhaus - генерирует списки IP адресов, замеченных в "спаммерской" активности, а также "угнанных" устройств, с помощью которых осущ. вредоносная деятельность.												
34	✖ drop	input		sbl spamhaus							0 B	0
::: Blocklist.de - бесплатный открытый ресурс, чьи сервера регулярно подвергаются различного рода атакам. IP адреса заносятся в список и выкладываются в общий доступ.												
35	✖ drop	input		sbl blocklist.de							0 B	0
36	✖ drop	forward		sbl dshield							0 B	0
37	✖ drop	forward		sbl spamhaus							0 B	0
38	✖ drop	forward		sbl blocklist.de							0 B	0
